-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over German 1,508,800 or WO 91/1,910 and further in view of Lemelson.

Each of the primary references substantially shows the invention as claimed except the step of reinforcement adding step. However, Lemelson shows that that it is conventional to add reinforcement material into molten metal during a composite making step. It would have been obvious to add reinforcements material into the molten metal of the primary reference if a composite article is designated. With respect to claim 3, it would have been obvious to add reinforcement material into molten magnesium if a magnesium metal matrix composite is designated.

3. Claims 1-10 are also rejected under 35 U.S.C. 103(a) as being unpatentable over Lemelson and further in view of either German 1,508,800 or WO 91/12,910.

Lemelson substantially shows the invention as claimed except the means for dividing the strand into pellets. However, each of the secondary references shows to provide dividing means in a continuous casting apparatus for forming grooves along the casting strand and thus divides the strand along the grooves to obtain pellets. It would have been obvious to provide the dividing means of the secondary references in the continuous casting apparatus of Lemelson if

Art Unit: 1725

pellets are to be obtained from the strand. With respect to claim 3, it would have been obvious to add reinforcement material into molten magnesium if a magnesium metal matrix composite is designated.

4. The patents to Thalmann, Yoshimura and Kim et al. are cited to further show the state of the art.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kuang Y. Lin whose telephone number is 571-272-1179.

The examiner can normally be reached on Monday-Friday, 10:00-6:30,.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas X Dunn can be reached on 571-272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
